

Deploy Chatbots

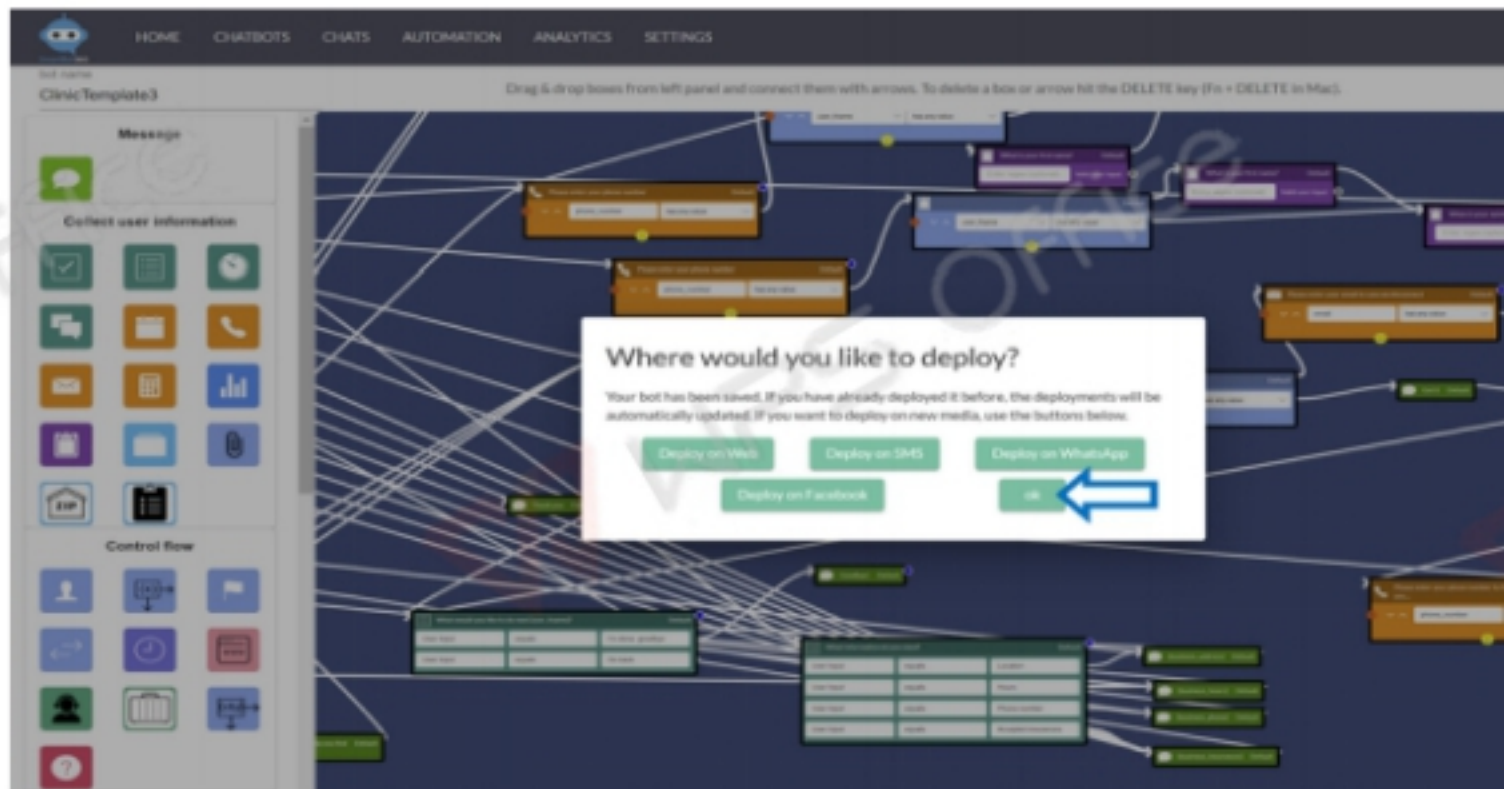

When creating a chatbot, you design the logic of a chatbot. To then bring it to life so your users can interact with it, you must deploy it on one of the media, which include Web pages, Facebook Messenger, WhatsApp and Twilio phone numbers. A key advantage of SmartBot360 is that you can deploy the same bot to multiple media to meet the users on their favorite medium.

The easiest way to deploy a bot is to follow the prompts right after creating a bot. First, go to CHATBOTS page and load your bot. Then click on "Save&Deploy" button as shown below.

Then, follow the prompts to choose the medium you want as described below.

After you deploy the bot the first time to a medium, if you make changes to the bot logic you don't have to repeat all steps of the Save&Deploy wizard. After clicking Save&Deploy, instead of selecting again the medium to deploy to, just click "ok", as shown below, and your bot logic will go live to all previously deployed media.

If you later want to change some non-logic attributes of a deployment (hashtag, presentation colors and so on) you don't have to start the Deploy & Save wizard again. Instead, go to the CHATBOTS page, and select the deployment you want to edit on the right panel.

The screenshot shows the Chatbots.com dashboard. On the left is a sidebar with filters for Bot Type (Flow Diagram, FAQ, Mini Page), Deployment Medium (Web, SMS, Whatsapp, Facebook), and Status (Draft, Ready to deploy, Deployed, Pending). The main area displays a table of bots:

Bot Name	Bot Type	Media	Time	Status
ClinicTemplate3	Flow Diagram	Web, SMS, Whatsapp, Facebook	Jun 1, 2022 11:11 PM	Deployed
ufftest	Flow Diagram	Web, SMS, Whatsapp, Facebook	May 12, 2022 2:08 AM	Deployed
SampleBotPrediabetes	Flow Diagram	Web, SMS, Whatsapp, Facebook	Apr 29, 2022 12:45 PM	Ready to deploy
ClinicTemplate3temp	Flow Diagram	Web, SMS, Whatsapp, Facebook	Apr 29, 2022 12:38 PM	Draft
frontdesk	Flow Diagram	Web, SMS, Whatsapp, Facebook	Mar 24, 2022 10:00 PM	Deployed

On the right, the 'ClinicTemplate3 Deployments' panel shows details for 'ClinicTemplate3 on Web 1', including an API Key, Hashtag, and Bot Attributes.

If you later want to change some *non-logic* attributes of a deployment (hashtag, presentation colors and so on) you don't have to start the Deploy&Save wizard again. Instead, go to the CHATBOTS page, and select the deployment you want to edit on the right panel.

The screenshot shows the Chatbots.com flow editor. A central dialog box displays the message: "Your bot has been deployed." Below this, it provides instructions on how to deploy the bot, including a code snippet to be pasted into an HTML page. The background shows a flow diagram with various action blocks like 'Collect user information', 'Control flow', and 'Integrations'.

Your bot has been deployed.

How to Deploy Your Bot

Copy and paste this snippet inside your HTML page just before the <body> closing tag.

HTML Snippet

```
<div id="smartbotstyles"></div><div id="smartbot368"></div><script>
(function() { var smartbot368 = document.getElementById("smartbot368");
var script = document.createElement("script");
smartbot368.setAttribute("picture", "true");
smartbot368.setAttribute("hideInWindow", "true");
smartbot368.setAttribute("hideInWindow", "false");
smartbot368.setAttribute("autoLogout", "true");
smartbot368.setAttribute("autoStart", "true");
smartbot368.setAttribute("botkey", "aed7dc08-0808-4c35-9018-90d0f9e4d9f"); smartbot368.setAttribute("bot-title", "SMARTBOT368");
smartbot368.setAttribute("sticky", "true"); script.setAttribute("type", "text/javascript"); script.setAttribute("src", "https://1xlandspiredocs.com/react/static/js/main.js");
document.body.appendChild(script); })(); </script>
```

Buttons: Done, Manage deployments

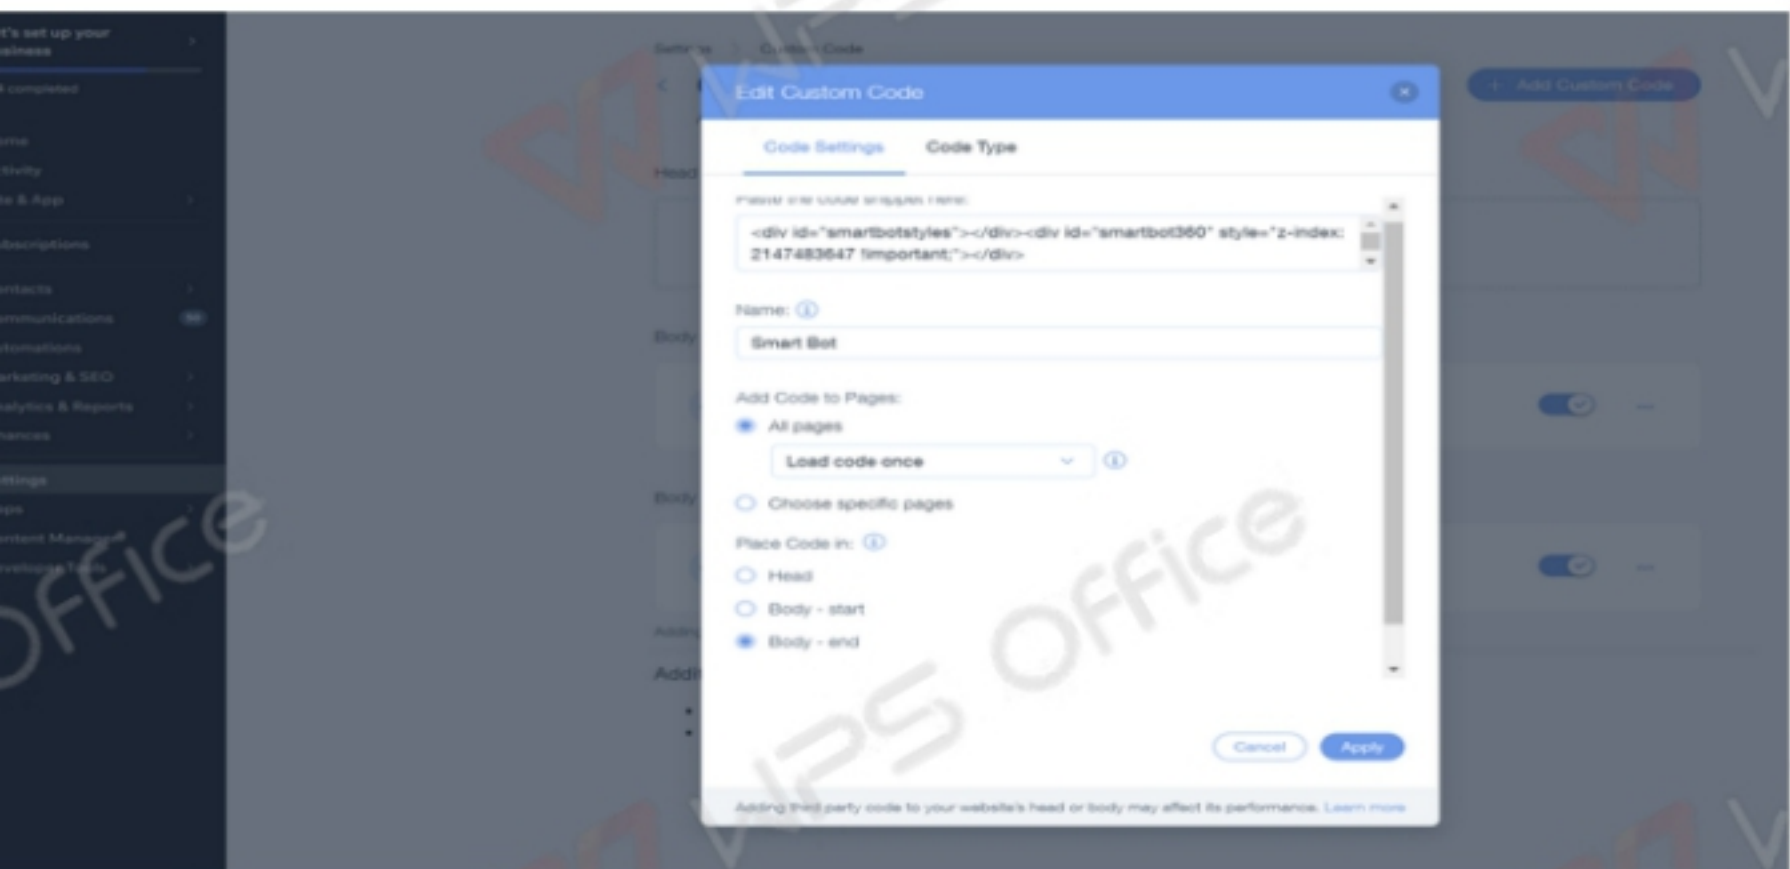

Here are more details on Step 4 in the above list, if you use one of the popular Web site hosting tools.

Wix:

4a. Go to Settings, then click on “ Custom code”

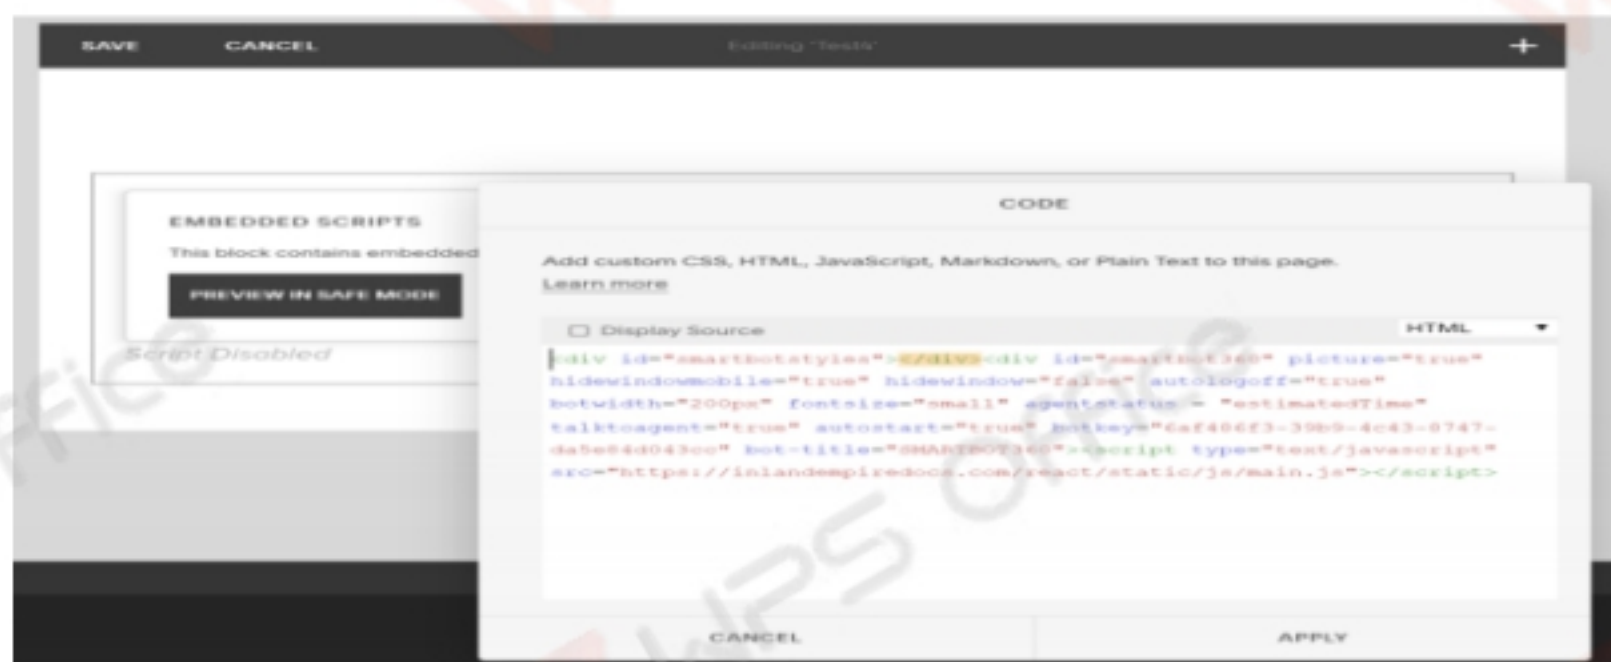

4b. Click + Add Custom Code

4c. Paste the snippet, and select all pages or the page to deploy the bot on as shown below. Make sure you select “ Body - end” and “ Load code once” . For more information, also see instructions from Wix.

Squarespace:

- 4a. Go to the page where you want to add the chatbot.
- 4b. Click on + and select a Code object.
- 4c. Go to the Code object and paste the snippet as below:

WordPress:

There are many variants of Wordpress, so instructions to insert HTML snippets may vary. The easiest way is to use a plugin that allows inserting HTML snippets, such as Scripts n Styles or Embed Code. Other ways are also possible as described in <https://www.godaddy.com/garage/3-ways-to-insert-javascript-into-wordpress-pages-or-posts/>.
